

88 TO ALL WHITE COMPANIONS!

ARYAN SALUTE FROM CULT LEADER MOCRO!

WITH THE RECENT RISE OF TOO MANY FAR-RIGHT NS WARRIORS, THE OFT-ASKED QUESTION, AND HOW IS IT SAFE TO HOLD RALLIES AND BURNS?!

IT BECAME NECESSARY TO WRITE YOU A MANUAL ON HOW TO CONDUCT ACTIONS, WHAT AND HOW TO DO, HOW TO CONDUCT THEM SAFELY, SO THAT AFTER THE FIRST ACTION TO YOUR HOME DID NOT VISIT YOU MEN IN BLACK. I'M WRITING THIS SO YOU'LL ALWAYS HAVE A DETAILED MANUAL ON STOCKS AND ARSON.

CONNECTION TO THE AUTHOR.

You can contact the author personally to learn more about what you are interested in, or to report bugs.

STEP-BY-STEP INSTRUCTIONS:

1) CLOTHING.

- For the action and reconnaissance of the area you should go in unattractive ordinary clothes, and change clothes in a secluded place **without cameras** and **unnecessary eyes**.

The best options are woods, wooded areas, woodlots, abandoned lots, etc.!

- Fashionistas: (The same ones who go to promotions on the clothes) **DO NOT** wear heavy shoes on white shoes, **BOMBER**, expensive clothes, etc. at the promotions, **YOU ONLY**. **ATTRACT THE ATTENTION OF THE POLICE AND OTHERS, AND YOU'LL BE EASIER TO IDENTIFY.**

Things should be ordinary and comfortable, so that it would not be a pity to throw them away or burn them. **DO NOT GO TO THE RALLIES IN PROVOCATIVE CLOTHING.**

- Clothing for the action must be disposable and without identifying, particularly memorable signs, just like shoes. Shoes should be several sizes up more or a size smaller. In order to remove the odor and trace from the dogs of cynologists it is necessary before the action to rub the soles and shoes with a mixture of red pepper/chlorine or pour a canister or thoroughly treated with antiseptic. After the action it is necessary to burn or otherwise destroy the clothes from the action. Weapons must be treated with antiseptic and hidden in a certain place, or thrown away. Any manipulation of the weapon or clothing make sure you wear alcohol-treated gloves and make sure things don't smell like you. Treat everything with antiseptic, including the murder weapon and the camera.

- You should also remember that during the action you may lose hair from your head, which is a clue that they will be able to find you. It is better to cut your hair short, or wear a mask to reduce the risk of this happening. You can also leave your DNA traces, It is best to wear several pairs of medical gloves to ensure that no traces are left behind.

- The best option is loose dark pants, dark hoodie, old sneakers and balaclava, if you do not have a balaclava can take an ordinary medical mask and pull the hood together with a cap. Also you can wear any one bright thing or accessory that would mislead the garbage men. After the action things should be left in the stash of things, for example, deep in the bushes (**There you can also leave and weapons**), or **burned**. Then change into a change of clothes, and leave the scene quickly.

2) TERRAIN RECONNAISSANCE.

- Before you go hunting, you should thoroughly investigate the area for cameras and garbage sites. Ideally, you should map out a couple of spots where victims are most likely to appear and it should not be crowded, **there should be no cameras and preferably not under windows**, because any gawker can look out the window and call the police, which is unlikely, but you should be careful. You can go to any other town near you, look around, see how crowded it is, **find a place where you will hide the stash and** **to change clothes**, it is desirable to make a hiding place somewhere in the bushes, in the woods, on a forest belt, you can also hide in some residential underpass, but it is not very safe. To change clothes after the action to find in advance any old subway where there is an exit to the roof, without cameras, there and you can do all their business and quietly hide.

3) FIREWORKS

- If you are aiming to simply maim/beat the victim, a **regular brass knuckle** will do, **telescopic baton**, **hammer**, **pepper spray**. It is also worth **taking a knife**, **folding and simple**, because you never know what to expect from some aggressive khacha, on the action victim can be and YOU. I **advise you to use tactical gloves**, **they are a good substitute for the same knuckles**.

More on Kastet:

- **It should not be lightweight**, especially if you are not a boxer with a good punch. The knuckles should not fit snugly on your fingers - you will blow off or break your hand. The material of the knuckle is not as important as the design (The **way it rests in the hand and feels on impact**) **Good when paired with something like a knife or gas**. A clean hit to the back of the head or jaw is almost guaranteed to render your opponent unconscious. I wouldn't count on you hitting someone in the temple and killing them, so **use brass knuckles** and **expect a good fight**. For especially bloodthirsty fans, spiked brass knuckles are a **good** choice.

) Therefore, if you do it yourself, you can weld two in front (**on the middle and ring finger**) and two above and below for vertical impact. Optimal length - up to a centimeter, no more, it is important that they are not too thin, they can fall off, especially if done crookedly.

I will separately disclose the topic of handmade brass knuckles.

The most common is cast lead, it is not worth saying much here, because everything has been thought up and optimized for you long ago, the form is molded for yourself, the technology is well known, the only remark is that the **walls of the rings should not be thin, otherwise your fingers will be clamped like in a vise**. In the presence of straight hands and desire can be made more solid, by hand machinations with tools from a piece of sheet steel. Here time will be spent more, but aesthetically can come out much better and much more reliable than the previous version. The principle of manufacturing is simple to the point of ugliness: mark out the outer contour and holes for fingers and to facilitate (**In the stop**) if they are needed, or in advance transfer the ready-made sketch. Cut out, drill holes, file or engraver to smoothness.

One last recommendation - use thick leather gloves (even "flush" to the tool), this gives maximum cushioning. Black knuckles on a black glove are practically indistinguishable in the dark.

Info has been taken from open source: ODERINT DUM METUANT, Written by Author H8TE YOU, also the original text has been edited by Red Laughing.

4) HOW TO KILL WITHOUT A TRACE.

(I'LL TELL YOU RIGHT AWAY, THIS METHOD WILL NOT WORK FOR EVERYONE, AS NOT EVERYONE LIVES ALONE IN AN APARTMENT/HOUSE)

- Consider the easiest method, for those who have a house/apartment at their disposal.

The beginning. **It is necessary to lure a person into your apartment/house**, further it is necessary to offer him to eat or drink something. We put in our dish or drink 3-4 **spoons of sleeping pills**, after that the person falls asleep. After he fell asleep, we take him to the bathtub, put him down. **We dress him a pair of medical/rubber gloves (If you don't want the blood to be in your room or on your bed, you must carry him to the bathtub)** In the bathtub itself, while your victim is sleeping, **pierce his throat with a knife. How to kill a man quickly and without screaming?**

We pierce his throat at the marks below:

- **Cut on the left side of the throat, where the carotid artery is.**
- **Cut on the right side of the throat, where the life blood flows.**

- Cut into the caddy where the ligaments are.

You have to do everything as fast as possible, the person will not be able to scream because you have already cut the ligaments and the carotid artery. **Next, we take the body bag and put it in there.** You should also be aware of the schedule of when the dumpsters are emptied.

EXIT: Dress in black clothes, old clothes, or clothes that we rarely wear or don't wear at all. Put on sunglasses, a cap, and a hood, **go out in 5 minutes to the trash.** Then throw the corpse in the trash can, and preferably bury it inside the trash can, and preferably without witnesses!

Summary: The corpse is dumped far, far away in a garbage dump, and you have successfully committed a murder. **IMPORTANT!**

YOU MUST BE IN A CHANGE OF CLOTHES THAT IS NOT SORRY TO THROW AWAY AND BURN, AND BE SURE TO WEAR A MASK, SO THAT YOU DO NOT LEAVE TRACES OF BLOOD ON YOU!

5) **MURDER.**

- Buy all the components for the campaign should be bought in less official stores in different parts of the city and over a period of time in order not to cause the of suspicion.

- Every action needs to be prepared for in advance. Whether it is hunting in a certain location or killing a certain victim. Initially, you should always scout the area and plan a clear escape route in advance. It is necessary to know ideally the location of the action. The murder weapon as well as clothes for disguise must be prepared in advance and hidden in a certain place. You need a safe place to change clothes and take the weapon. Or the weapon and clothes should be hidden in different places in advance. All of this is necessary for

to move around the city safely and avoid any risk. During a murder, you need to act instantly, as quickly and decisively as possible, so that the victim does not have time to realize anything or call for help. The ideal attack is to strike silently from the back, strike a blow

a hammer to the head or a knife to the neck. If the victim has discovered you but does not suspect anything yet and there is no possibility of attacking from behind, **you should strike as quickly and murderously** as possible, if the victim is sober and too focused on you.

You can go for certain tricks, like asking for time or anything that will distract the victim's attention so that they don't have time to react to the attack. **You can also douse the victim with a can of water and then start striking. If the victim is under the influence of alcohol or drugs, you don't have to worry and attack brazenly and start hitting and killing.**

- **You must first disarm the victim**, knock him out or kill him, and then take out a camera and start filming with a flash, filming further **blows and abuse.**

It is obligatory and very important to make the most violent video: gouge out eyes, cut off ears, or inflict a huge amount of damage in the form of **knife blows or hammer blows to the face/head**, rip the belly, **you need to shoot clearly**, so that everything was clearly visible. **The more violent the video the better.**

In appropriate circumstances, **it is desirable to**

dismember the body and scatter the remains over the area. The video should be maximized violent. All in order that the viewer - whether it is an ordinary person, an enemy of the cult or anyone else, **this video caused maximum horror and disgust to vomit, it creates maximum resonance, publicity, the growth of fame of the cult and horror among the public. After the action, it is necessary go to that safe place and change clothes. Burn the clothes from the action.** For example. It is very good if this place is in the forest, forest belt, forest plantation, abandoned or other deserted place. If in the neighborhood there are no such locations and the action takes place purely in the city - you can find a line of houses in advance in such a way that they stood in close proximity. Conduct a reconnaissance of cameras in the entrances. And the presence of an open roof. **You need two entrances.** For example, the entrance of the first house and the entrance of the last house. **There should be no cameras in the entrances and the roof should be open.** Even if the roof is closed and there are cameras, the situation is possible.

fix it. A day before the action, open the roof by breaking the locks and disabling the cameras. In order that after the action you could safely enter the entrance, get out on the roof, which should also be checked in advance for the presence of cameras. **Burn the clothes from the action. Change your clothes.** И then go through the roof to the entrance of the fifth house, through which you're in different clothes. exit safely. **It is advisable to treat the murder weapon well with antiseptic after killing and never touch it without gloves.** Hide them in the designated stash for murder weapons. **With firearms, everything is much easier,** you can also create a stash in which you will hide things and weapons, inspect the location, choose a victim. Approaching the victim, **shot in the head**, death. **The main thing is to do everything very quickly.** But it will attract a lot of attention, so you have to flee the scene immediately.

Be sure to have a plan in advance before the assassination, such as a plan of action, weapons and stash, and a plan of retreat.

- **You can also shoot a person in the face with a rocket launcher**, if you get close enough to the victim and play the headshot, you will leave the victim with a burn on the face in the at best. After the shot is fired, you can do whatever you want to the victim, as he will be immobilized, shocked and most likely deprived of sight.

6) CONNECTIONS.

- **Arson is a spectacular way of inflicting damage on our enemies.** Unlike beating up guest workers, arson is not only supported by the people, but is also one of the most difficult crimes to solve - **even arsonists cannot be dealt with.** **professional detectives from European countries**, far beyond our uneducated ones.

to the cops. Remember at least the "epidemic" of car arsonists. Organizing an arson (**compared to liquidation or kidnapping of an enemy of the people**) is quite simple: it is not necessary to have military training, any sufficiently cautious right-wing activist can do it. If you organize everything correctly, it will be almost impossible to identify you.

Object

- **You may have already identified the object of your attention.** If so, consider whether it is at all possible to achieve your goals with the chosen means with the chosen object. When you already have a formed opinion about the goals of your action, means and object, in essence, you have a draft plan of action ready. That is: you know what you aspire to, how and where you will realize it. When you have this understanding, you can carry out the first reconnaissance of the facility.

Initial reconnaissance

- Even if you plan to conduct the action in the dark, it is **preferable to see the site in broad daylight**. Take the opportunity to obtain valuable information about the site.

Obtain maps, photographs, plans of the site and surrounding area.

Look at where you can drop off/gather. How you will approach and leave. How you will leave the neighborhood. Pay attention to places where you can leave your vehicle. Especially roadways that could be used for circulating traffic while the event is taking place. action. This may be preferable to having a car waiting for you in one place.

Basic plan

- After initial reconnaissance, **find a safe place**, gather with your comrades and **Develop a basic plan for the operation. Choose a route to the action site** that is as free of security cameras as possible, a drop-off or parking location, point(s) of approach to the site, point(s) of exit from the site, and an evacuation route. Decide when you are planning the event, what time of day, approximately how much time you will allow for each phase of the operation (arriving at the drop-off/parking location, traveling from the drop-off/parking location to the site, action, regrouping, moving to the evacuation site, and the departure itself), how many people are needed.

The plan should take into account where the vehicles used for arrival and evacuation are located, and routes to these locations should be worked out. The plan should take into account means of communication. Who needs to have sustained communication with whom and how communication during the course of the event. This could be communication between the drivers and the group, the group and the Scouts, or communication between the RF scanner and everyone else.

Secondary exploration

- **If you have planned an action in the dark, conduct a secondary reconnaissance in the dark to familiarize yourself with the terrain with limited visibility.** Sometimes

It is possible to conduct both reconnaissance surveys on the same day and plan the action afterwards.

During the second reconnaissance, examine the facility in more detail. Pay particular attention to security systems. Measure the time costs of the various phases of your plan (**see above**).

Consider what tools you will need and what you will do with them after the action. Carefully consider the routes to and from the operation site, as well as vehicle routes and stopping/parking areas. These should be out of sight of CCTV cameras and you should mark alternative unloading/loading locations in case of emergencies (cops, roadworks, parked cars, etc.).

vehicles). Make sure that the drop-off and pick-up points are away from buildings and streetlights and that there is enough room to turn around. If the evacuation point is away from the facility, you will should choose a place to regroup to leave the facility together. Decide on communications equipment and check its functionality in the vicinity of the facility. Think about how far you are going to take the physical items with you evidence and find places along the despatch route where you can drop items of clothing and - possibly - tools. Mark possible collection points (**Preferably not closer than one and a half kilometers from the facility**) where you could regroup in case things went wrong for some reason and you had to scatter.

Detailed plan

- **This plan should supplement the basic plan with all of the information that you**

It should include everything from the moment people gather **to move to the action to** the moment everyone says **goodbye**. It should include everything from the moment people gather to move to the action to the moment when everyone says goodbye and leaves.

go about their business. **It should include precise time frames for each stage of the operation, it should note the routes of travel, what is happening at what stage of the operation, who is communicating with whom, what tools and equipment are being used, what is being used as transportation, who is performing what roles (Driver,**

navigator, sentries, etc.). The plan should include places where you can drop your evidence, as well as places to regroup. If possible - try to find someone you trust to have that person sitting on the phone away from the scene. In case of an emergency you will be able to call him. It makes sense to give him a large, detailed map of the area so that in case you get lost and call him, he can help you. **Use disposable phone-SIM pairs** for this kind of communication. **Do not use your regular cell or landline numbers.**

Talk through all the plans

- If possible, **involve everyone involved in the action in** talking through the plan and making any changes they feel are necessary. **All noted roles should be outlined and everyone should know what they will be doing**. You should decide what to bring to the event, who will buy/get the items and who will bring them to the meeting place before the event. Everyone should have a firm grasp of the cell phone numbers and radio channels that will be used during the event. It is at this point that you should determine if you need to learn new skills and practice them in "neutral" territory. So that you don't have to learn the skills in the thick of the action. Finally, you must

Decide how to organize yourself for the duration of the action. You can get into pairs or small subgroups of a few people. **This will make it easier to keep an eye on each other during the action**, it will make it **easier to** move quickly, and you will know quickly if someone is falling behind. **Make sure everyone in your group knows what names and addresses they will give in case of arrest.**

Action

- Before you go to the meeting place, go **through a list of what you will need and take the necessary time to assemble**. Take the time to arrive at the gathering place on time to avoid a suspicious concentration of unidentified people. It makes sense to gather before

The action should take place at a neutral location, not at a comrade's house or in the center of town. **On the way to the operation site, make sure that everyone in your group has a clear understanding of the**

what they're going to do. Try to avoid unnecessary stops. In case a stop is necessary, remember that most shopping centers and gas stations are equipped with security cameras. If all goes well, you will get to your destination without incident. **Put on all disguises (hoods, masks, gloves) at the very last moment, so that you do not arouse suspicion with your appearance in case a security patrol appears.**

If you are operating at night, **try to avoid**

use flashlights and interior lights in the car for about 20 minutes before disembarking. This way your eyes can get used to the darkness. Once you have started to take action,

Try to stay focused on your task, but keep your eyes on your comrades and keep an overview of the big picture. It is important to follow established methods of communication, i.e. to stay in sight and

within hearing distance in case you need to relay a message/check that everyone is in place. Your wristwatches should be synchronized well in advance so that people can regroup and prepare to leave at a predetermined end time. If you do not have a clearly marked end time, agree on a clearly visible signal. **Gather at the regrouping point and make sure no one has fallen behind and everyone is OK.**

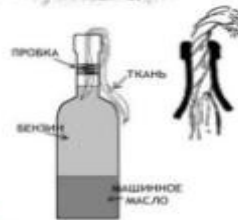

This will be easier to accomplish if the group is organized into pairs beforehand and the people in the pair stick together and keep an eye on their partner throughout the event. If someone is missing, make an effort to find out fate. Depending on the type of operation and the fate of the missing person(s), this may be the time to destroy certain compromising items. If the operation is not going as planned and people are forced to disperse, try to

Stay close to your partner or subgroup, move quickly, but keep an idea of your direction of travel. **If you are operating at night, you run the risk of losing your bearings and getting lost very quickly, so it makes sense to review a map of the area before the action so you have a clear idea of which direction and where to try to go in case of an emergency. The most important thing is not to give in under any circumstances**

panic. Remember that many people before you have gotten out of the most hopeless situations by staying calm and persevering to avoid arrest! If possible, get to a pre-arranged meeting place. If for some reason this is not an option for you -

Leave the area of operation as soon as possible and contact the coordinator by emergency telephone as soon as possible to let your comrades know that everything is all right.

ПРИНЦИП ДЕЙСТВИЯ: Обычная (0,5–1 л.) водочная бутылка, наполненная (оставляя горло пустым) зажигательной жидкостью (бензин, напалмовые смеси). Бутылка герметично заткнута пластиковой или металлической завинчивающейся пробой. Фитиль (кусочек несинтетической ткани; длина 15 см) закрепляется пробой или смачивается перед использованием в самой этой жидкости (керосин, спирт, бензин). Фитиль (важно, чтобы как можно плотнее входил в горлышко бутылки) поджигают и бросают в цель. Можно просто снаружи обмотать горлышко бутылки пайкой. Когда бутылка разбивается, воспламеняется облако из бензиновых паров и капель, образуя огненный шар, затем бушует оставшаяся часть топлива. Другие горючие смеси (дизельное топливо, метанол, скипидар) могут быть использованы вместо или в смеси с бензином. Загустители (пенопласт, деготь, сахар, кровь, полистирол, яичный белок, моторные масла, резиновый клей, средства для мытья посуды) помогают удерживаться на цели и создавать клубы едкого, удушающего дыма.

РЕЦЕПТЫ КОКТЕЙЛЯ:

БЕНЗИН + СКИПИДАР = 1:1
Смесь легко загорается, горит сильно, жарит пламенем довольно длительного крика.
БЕНЗИН + МАСЛО (ЛЬНЯНОЕ, ХЛОПКОВОЕ, ПОДСОЛНЕЧНОЕ, МОТОРНОЕ) = 3:1
АЦЕТОН + СКИПИДАР = 1:1
Смесь очень легко воспламеняется. Горит сильным пламенем.
БЕНЗИН + КЕРОСИН + СКИПИДАР = 2:1:1
МАСЛО + БЕНЗИН + СКИПИДАР = 1:4:1
Состав хорошо растекается по любым поверхностям, моментально воспламеняется и поджигает даже слабогорючие вещества.

РЕЦЕПТЫ НАПАЛМА:

Напалм состоит из 3 компонентов:
ЗАГУСТИТЕЛЬ
(Полистирол: пластиковые линейки, разовая посуда, упаковочный пенопласт, корпус от шариковых ручек, шарик для пинг-понга)
РАСТВОРИТЕЛЬ
(Бензин; толуол; дихлорэтан; растворители в которых можно растворить полистирол)
РАЗЖАВИТЕЛЬ
(Бензин)

БЕНЗИН + ЛАК ИЛИ МАСЛО + ПОРОШОК АЛЮМИНИЯ = 2:1:1
Чем больше порошка алюминия, тем больше проявит атравматическую способность.

Налейте растворитель в банку с плотно завинчивающейся крышкой. Порезьте пластмассу на небольшие кусочки и киньте их в растворитель. Хорошо закройте банку и оставьте её стоять на ночь. Утром перемешайте. Должна образоваться очень густая сиропообразная масса. Если вся пластмасса растворилась, а консистенция смеси остаётся жидкой - добавьте ещё пластмассы, закройте и оставьте на некоторое время, периодически перемешивая. Должен получиться однородный густой "иксель". Теперь в этот "иксель" добавьте бензин, небольшими порциями, хорошо вымешивая металлической ложкой или встряхивая в плотно закрытой банке. Соотношение "иксель"/бензин = 1:1. У вас получится однородная масса консистенции жидкого сиропа - это и есть Напалм.

В ацетон кидайте небольшие кусочки пенопласта (упаковки от бытовой техники). Пенопласт буквально тает на глазах. 1 объём ацетона способен растворить 20-25 объёмов пенопласта. Не берите сначала большое количество ацетона, 100-300 мл будет вполне достаточно. Натолкайте в банку с ацетоном на дне до самого верха пенопластом, закройте крышкой и несколько раз встряхните. Пенопласт практически моментально растворится. Добавьте следующую порцию и так до тех пор, пока в смеси не исчезнет слой ацетона наверху и получится очень густой, однородный сироп. Можно ещё бросить туда несколько раздавленных шариков для пинг-понга. Теперь прибавляйте понемногу бензин, хорошо встряхивая и вымешивая. Соотношение сироп/бензин = 1:1. У вас получится однородная густоватая жидкость. Если смешивается плохо, добавьте немного Растворителя-647.

Внимание!
Во время приготовления зажигательных жидкостей не допускать наличие рядом открытого источника огня!

АЛЬТЕРНАТИВНЫЕ ФИТИЛИ:

Сигарета с пучком спичек обеспечивает задержку в несколько минут.

Пучок охотничьих спичек обеспечивает задержку 3-8 сек.

КАК ИСПОЛЬЗОВАТЬ:

Не перебрасывайте через толпу ваших союзников.

После броска сразу отбегайте в толпу или в укрытие.

Бросайте сильно вверх и немного под углом, так сложнее уклониться.

Бросайте в места скопления стражей порядка.

В стёкла автомобилей, колёса автобусов, вентиляционные решётки, под днище.

Современные танки защищены от воздействия Коктейля молотова, но он может повредить некоторые внешние компоненты (оптические системы, антенны, вентиляционные отверстия), что сделает танк практически "слепым".

В закрытых помещениях сразу же возникает обширный очаг пожара, который потушить своими силами не представляется возможным.

Создавайте огневое заграждение. Если кинуть несколько бутылок перед наступающим полицейским кордоном, то они вряд ли будут активно двигаться дальше, пока всё не прогорит.

На месте носите коктейли в ящике для бутылок уже со смоченными фитилями. Раздавайте их.

Бросок:

After the action.

- Try to hold a meeting of all participants in the action to discuss the planning and execution stages of the operation. Reflect on what went well and what didn't and draw conclusions for the future. The best time to do this is within the first few days after the action, while memories are fresh and important details have not been forgotten.

Safety

- **Don't forget about safety just because the action is over.** The cops have a longer memory than we do, and if you are lucky and the cops decide that your action is a threat to the state, the investigation can last for months - and even years.

- **It is impossible to achieve a completely safe environment for surgery. No matter what you do**
- **there is always a risk that you will be caught.** Safety principles are something that help to reduce the risks. **Here are some ways people use to keep themselves out of prison.**

Physical evidence

- **Diaries, plans, manuals, items left at the scene of an action due to circumstances or intentionally.** Communiqués, information stored on computers, traces on company financial records from the use of bank cards to rent or buy equipment. **Use cash and destroy any information about the event before you go to it.** Do not bring anything that can be directly linked to your identity (**such as jewelry or identification**). If you are renting equipment, seriously consider using fake IDs. **If you use a computer, encrypt your files** with PGP.

Evidence

- **Mostly fingerprints and DNA samples,** but it can also be matching instruments, soil samples and shoe impressions. **Be aware of the possibility of leaving prints fingers on not-so-obvious objects (Flashlight batteries).** **Make sure that you Wipe off fingerprints from all objects before you act. Always wear gloves and hats.** After the action, get rid of anything that can clearly identify you (**Clothing and tools**) as soon as possible.

Witnesses

- People who notice you and will be able to recognize you or your vehicle. Not only during the action, but also on the way to the action. And even if they notice you leaving your home during the period of time that can be linked to the action. Surveillance camera footage also falls into this category. **Plan your meetings, routes and the like to avoid cameras and vigilant neighbors.** Use personal disguises, **don't wear conspicuous clothing. Do not tell people things they should not know.**

Outdoor surveillance

- **Includes telephone eavesdropping, interception of mail and Internet messages, listening through various household devices, surveillance, placement of a tracker the equipment in your car.** May be carried out by various (sometimes competing) public and (less often) private services. May be a routine "tick box" activity (unlikely to have much impact on your performance), or may be such that your words and actions are carefully monitored and recorded. Avoid any form of communication on direct action topics in apartments, by mail or telephone. **When going to an action, make sure you are not being tailed.**

Exploration/share checklist

The following is a checklist of equipment that may be useful during a reconnaissance or action. Use it as is, or modify it to reflect your group's specific activities. **Hopefully, this will help avoid the situation where you are all driving down a road at night in an unfamiliar area, someone asks, "So, who grabbed the map?"**

Group Recruitment:

vehicle with a full tank and spare parts keys in case of
breakdowns

spare key set road map

detailed location map

Fully charged communications equipment,

emergency money

trash bags for quick dumping of evidence, first aid kit

In addition to the above, you will also need specific equipment depending on the type of

reconnaissance or action. You may need binoculars, a radio frequency scanner, a notebook and a pen, flag, video camera and navigation system (GPS). Special equipment may also be needed to implement your ideas (sabotage tools, crowbars, sticks, etc.). Don't forget the spare tools and a set of batteries.

Customized Recruitment:

spare clothes and shoes

waterproof jacket and pants

synchronized watch

Masks and other means of concealing identity Gloves

a small flashlight (preferably with a red or blue color filter) a compass and a map of the area (make sure you don't leave any marks on it)

food and water (hot drink flask)

some fuel and emergency money for self-defense.

a backpack to carry all this stuff in

In addition to all of the above, everyone involved in the action should have a clear understanding of all of the following

the plan of operation and his role.

How to set a car on fire:

I hope that class consciousness allows me to no longer discuss questions like why people around the world are burning cars and I can address the more interesting aspects of this issue. **It's a very simple method of protest and doesn't require any hard skills, quitting the movement or anything else.** So, you've started to think that it would be a good idea to burn a Mercedes

an official in the next yard to the house of your favorite mommy. **You can do this both in case of some protests and as a sign of solidarity, or just to celebrate the birthday of your daddy's aunt's sister.** I'm sure that every second person reading these lines asked a similar question, but only every thirtieth person has done it. Now I will try to dispel the myth about the complexity of such an action and how: "soon you all shitheads will be put to death! You will answer for my Lexus!"

The first thing to do is to find one or two more helpers. Never offer such an open text: "dear, would you be so kind to compose me a

company in destroying a couple of SUVs in the neighborhood tonight." **NO NO and NO NO!!!**

That's not what we're suggesting.".... Mr. Policeman, I never suggested that. **That I have**

the **matches are dry next time if I'm lying!**" The best candidate to help you is your a close friend with whom you play poker on Fridays, watch the stars, or do graffiti together. **You should not suggest such things to people you don't know, and especially not to those who constantly incite others to do the same.** These people have been shown to be practice, chatty and unreliable. Chat with your future colleague over a cup of tea about how bad it is that you didn't have enough money for a ride today, while in the next neighborhood cars cheaper than a million don't park. - "...Oh yes bloody freaks. I hate them so much! I wish they'd all go down in flames." and BINGO! Now get closer to the purpose of the conversation and summarize what your conversation partner has pretty much agreed to. To consolidate the result, it is worth discussing the fact that this is all criminal, and that it is not worth telling at a freemarket or movie screening about it afterwards. If everyone is satisfied, then, as they say, **canister in your hands, gun in your armpit. One liter was enough to destroy a car.**

a **molotov cocktail** thrown into the interior of the car, but the **surest way is 2-3 liters of gasoline.** Some people have enough and 1.5, but in such a case more is not less. **You will also need a large rag or several of them. Lighting with a lighter is not very practical.** I recommend bringing a box and 2-3 hunting matches. Gasoline is best to bring to the place in plastic 5-liter bottles of mineral water. It will have to be poured either to a person who has a car (it can be for example a person who will give you a ride and pick you up from the place).

You can either go to a gas station farther away from your home and pour a few liters into a canister.

Remember that they don't fill plastic at gas stations. Especially in the center.

Keep the canister tightly closed and wrapped in a couple of garbage bags, they are best at keeping the gasoline smell out. So we have everything we need. Now we pick a place and

the car. **For the first few times, it is best to do it where it will not be difficult to escape.** There may be a park in the neighborhood, some dark yards where cars cannot pass, a forest,

railroad tracks and a **lot of other places where you can disappear into the night. Don't go for more**

than one car at a time or for cars in secure parking lots. Try something simpler first. As for cars, **we will be satisfied with all options from a million rubles - it is all sorts of Toyotas Landcruisers, Land Rovers, brand new Mercs, Bmws, Hummers, Porsches and Lexuses.** This is that basic set, which is quite a lot in our yards and with which you definitely can not miss in the price category. **ATTENTION!!!**

It is inadmissible to burn inexpensive cars of ordinary people!!! Exceptions are cars with passes of the Ministry of Internal Affairs, FSB, SSB, FSIN,

tax office, prosecutor's office, government and so on. However, even if we have a pass from the Ministry of Internal Affairs, we will think twice before burning, for example, a Zhiguli. We cannot be sure that all those who work in the authorities are thieves and bandits. **Burn expensive cars with passes.** It's not

you're gonna make a mistake either way. Remember, when unsubscribing, you must not be allowed to sit in the

the car under the camera. It is better if on the route of unsubscribing cameras will not meet at all, or they can be bypassed. **So the coveted night is here.** You get to a place not far from the target.

Your backpack contains a 2-3 liter tank of gasoline and rags. You've talked it over remaining nuances (Who is the lookout, if necessary. Until what time the driver is waiting for you in the car, if any, etc. On the action, if **there are** no problems takes no more than 5 min) **Checked the presence of masks, gloves, knives and other necessary ammunition. You approach at close range but stay in the darkness of the trees. The best time is after midnight Sunday, Monday, Tuesday. These days are the least likely**

of strangers on the street at night. If there are 3 of you, one of you will watch the "hustle". As soon as the action starts, he should sound the alarm only if he sees musosov in other case it will be easier to finish everything than to leave halfway. Everything will take 20 seconds max. So it is better to wait for a good moment and do not get distracted for nothing. If there are two of you, no one is watching the "hustle". Just wait for the moment and go. In the tasks of one person will be to pour gasoline, the second to cover with rags and ignition.

The person with the gasoline should cut the neck as wide as possible before the X moment. This will allow the gasoline to be poured as from a bucket and will significantly reduce the time of presence near the

cars. The first one is a man with rags, the second one follows 4-5 steps behind. The first one carries If you have one big rag, you put it on the front tire, if you have two, you put one on the tire, one between the hood and the windshield. If you have one large rag, you put it on the front wheel, if you have two, one on the wheel, the second between the hood and the windshield. Once placed take a step back and get ready to fire up. How

only the first man lays down the rags, the second man pours half the gasoline on the wheel and half of it where the other rag should be. Do not pour gasoline just on the hood, it is of no use. Once you have poured the gasoline, put the canister in the same place, you won't need it anymore.

The first person strikes a match, throws it, and you run for your life. Remember that any items you may have left behind or lost should be wiped clean of prints, as they may become evidence. You get to the car, jump in, your heart races and you drive away. Now you need to calm down. Whoever says it's only scary the first time is lying! It's always scary, not as scary as the first time, but still. If you are stopped by a traffic police officer, do not shake and do not panic. It's just that they have little work at night and most likely stopped you

just to check the paperwork. It'd be best if by now you weren't sitting there all in a black. That's it. You're gone. All that's left is to deal with the stress and post the report. For the report, you'll need a laptop, someone to write it and send it to. We go to some Mac with no cameras. Sit down, get wi-fi. We create a disposable mail on Google, write a letter on black blog, upload information on indymedia, delete the mail and get away with a clean soul (if you use Tor according to all the rules, then all these operations can be safely done on your home computer - note: BS). In order not to be stupid with mail, you can practice at home, creating mail like Oduvanchik1993 (at) gmail.com, but not ekstremist (at) gmail.com. The last thing left to do is to get together the next day or the day after and discuss it

past action. Don't forget that all discussions and even more so the action is held without phones or with disassembled handsets. Discuss who didn't like what, who did what wrong, who is afraid of what to burn next time) Remember that communication in such a group is necessary, because a person will want to talk out, to tell his fears. Such conversations within the group will prevent paranoia from developing and avoid bragging to other activists. Good luck! And may the fire light your way home.

Goal selection. The objectives can be divided into 2 groups:

State:

- any FSB and MIA facilities: E centers, internal affairs offices, police stations, traffic police stations; courts, prosecutor's offices, bailiff services; offices of Zhidina Rossiya, public offices reception rooms of Putin and other officials; tax authorities; cars of officials occupying high positions in the above-mentioned and other departments: expensive cars with a special pass of the Ministry of Internal Affairs or the FSB on the windshield, license plates of the AMR series, or if you from any sources reliably know that this is Stelkin's car, and he is a bribe taker; MIA transportation: funnels, autozaks, etc.

Miscellaneous:

- tents and other businesses of churkas; churkas' houses, gypsy and other ethnic settlements; drug dens; migrant hostels, mosques, synagogues (it is better to blow them the fuck up); cars with Caucasian license plates, tchotchkes on the rearview mirror or if you know from any sources that the car belongs to a non-Russian; collection agencies (these are such racketeers who knock out debts); commercial structures (firms) hostile to the people,

who take away people's land for development, engage in "black real estate", illegal logging, fraud and other anti-people activities); if I

I've forgotten something - pick a target, there's plenty of them. The goal must meet one criterion - to arouse the hatred of the people! The more hatred a target arouses, the more popular support our movement will receive. Remember the Primorsky partisans, who, killing hateful cops while criticizing the Interior Ministry, received support from 80% of the population. the population. The choice of target depends first of all on the public mood at the moment in the country or locality where your group operates. But I want to remind you of one thing the truth - the main enemy of the Russian people is not the Khachis and Churks, but Putin's occupation regime. The author's recommended target structure is 1 to 5, i.e. for every 1 "Khachov" target burned, there should be at least 5 state targets. Although, for example, in case of interethnic conflict, the number of "Khachov" targets can be increased. **In short, look at the situation: there was a scandal with police brutality - the police are not allowed to burn the target. burn the police, judges have passed unjust verdicts - burn the court or the prosecutor's office, a drug den is a gaping ulcer on the city - burn it down, occurred in a populated area interethnic conflict - smoothly move to churban targets, conscription has begun - burn down the military enlistment office and all young people over 18 will give you a standing ovation. After all, you are Russian nationalists, learn to feel the moods of your own people. Be in resonance with society and society will respond with its support.**

Create special sites where people themselves can give us the coordinates of objects, deserving of popular retribution, the machines of the enemies of the people, or even the identity of the enemies of the people themselves.

2. **I would like to draw your attention once again to the dangers of cell phones - too many autonomous resistance groups have gotten it wrong.** Usually it's, uh, secondary school students who decided to play guerrilla. But there are also quite experienced guys. For example, the Oryol partisans, who under the careful guidance of the of a former FSO officer, about 20 arson attacks, were caught after a bomb exploded in Cafe Indira, which was activated by a call from a cell phone. A fragment of the SIM card survived, and the investigators used it to find the phone from which it was last called, and the phone that was used to make the call. to the team leader. **In short, leave this crap at home - Satan himself invented mobile communication to make it easier for the ZOG dogs to follow us (just kidding).**

3. **Insurance. It is not safe to be on the streets, especially at night,** even if you do not intend to do anything illegal. Many dangers await you - for example, retreating through a vacant lot, brave guerrillas may well become victims of a pack of stray dogs settled there. And any car owner, accidentally waking up at night to go to the toilet and seeing in the window, as you If you set fire to his (or a neighbor's) car, he may well not only dial 02, but also rush to defend his property, especially if he is a hot Caucasian dzhigit with a traumach. And wild churkas, drunken gopniks, and many other things. So if possible, I advise you to go to the rallies have a weapon for backup: non-lethal (taser, gas canister, DO NOT take "Punch" - it eats shell casings) and lethal (knives, ideally firearms). Good items to use dual-purpose: taps, hammers, screwdrivers. Traumatcher for partisan needs - take a revolver or Wasp - they don't waste shell casings and are always ready for a fight (stupid Russian laws forbid gun owners to carry a cartridge in the chamber), and the Wasp in addition is considered the most powerful on the Russian market. Ammunition is a bit small - 4 in the Wasp and

maximum 6 in a revolver, but as the Americans say, if you don't have 5, you don't have 25. Some traumatic weapons (Wasp, for sure) have flares, which are not only suitable for We can use them to transmit signals (however, they are also useful for the spooks for their direct purpose). Smoothbore - sawed-off shotgun, loaded with nail caps (it is not recommended to use them often - it spoils the barrel, but we don't need them often) or jagan. Bullets for rifled weapons by grinding

We use a file on the tip (automatic rifles) or a cross-shaped cut with a hacksaw (pistols) to turn them into semi-shell dum-dum bullets (google), which, flattening and splitting on impact with the target, cause severe damage and painful shock, rather than being able to stop the enemy with a single shot, which is very important for us when we encounter a PPS patrol. The use of such bullets leads to lead tarnishing of the barrel bore, so take good care of your weapon.

4. If you are not properly armed, the outcome of your encounter with a PPP patrol depends on your hustle, concealment, and long-range, quick escape skills. Do not take Go as light as possible, wear black clothes and light black sneakers. Go as light as possible, wear black clothes and light black sneakers. When scouting, plan in advance where you will run away if the police arrive from one side or the other: in back alleys, narrow passages, through the fence (without the appropriate skill, it is better not to) - where the police car will not pass. Moving along In the city at night, always think about where you can run or hide in case of an emergency. Train: reaction, running for speed and endurance, parkour.

5. It is better to carry out any night actions between 3 and 5 a.m. - sleep at this time is especially strong. We know from the practice of night arson: some TV viewer is sure to call the fire department. One asshole, having frightened the arsonist, even rushed to extinguish the fire the reception room of the nation's favorite party, "Fucking Russia."

6. Much depends on weather conditions: in dry and hot weather it burns well, in rain or frost the amount of combustible mixture will have to be increased. In general, difficult weather conditions are true allies of urban guerrillas. In weather when "the owner will not kick the dog out of the house" potential witnesses are sitting at home, and the cops don't really want to work. Make the weather work for you - get smart. For example, when the asphalt is covered with a nasty slippery crust of ice in winter, it allows you to run away from the cops with the help of flip flops (google it). The best gift that nature can give us is smog, which is established in summer over the cities located near forest fires: visibility is zero, witnesses try not to go outdoors or at all. They go to their summer homes, masks and respirators do not arouse suspicion, dogs do not pick up the trail, cops are not on duty, and the dry and hot air is so favorable to arson.... If next summer in your city this happens - be sure to take advantage of such a gift of fate. The author even has a red-hot idea to purposefully set fire to forests in order to terrorize the authorities and dudes with impunity. Do not take this idea seriously.

7. To set cars on fire more effectively, disable the alarm system with a code-grabber (a device used by car thieves) - people are asleep! You can buy it in the Russian Federation (watch out, setup!) or get it from abroad (in a Chinese online store).

8. The facilities of law enforcement agencies, prosecutor's offices and courts are usually guarded. In order to prevent a cop-guard from jumping out of a snuffbox at you, it is necessary to lock the doors of the building beforehand.

Keep in mind that there are usually several exits in a building. The easiest way is to tie the handle Use a rope (e.g., to the bars of a nearby window, if double doors, tie the handles together) or support it with something heavy: a trash can or furniture that people often leave near trash cans. If you don't have anything at hand, just pour a liter of fire extinguisher under the door and throw a match. It's not that we're sadistic, it's just that encountering a security guard is fraught with unnecessary finger-pointing, or even disruption of the whole action, or even fire on the with a standard issue weapon. You don't have to worry about the guard: most likely firemen will rescue him, in extreme case he will jump from the second floor window. If you have firearms, you can ambush the guard - in case of success, you will become the happy owners of the gun with a service pistol. If it not possible to block/ignite the door or set up an ambush, you should carry out the action as quickly as possible. Choose the window furthest away from the door, and the same goes for escape routes. All of the above is more than true for setting fire to premises inhabited by chinks - take measures to bake the invaders to a crisp! Poorly roasted Khachis can go to steal, rob, and kill on the streets of our cities.

9. Do not throw molotov cocktails at the windows of buildings - this will only burn a country house with wooden ceilings. In the case of an urban building, this is completely ineffective - as practice shows, at most the window frame and furniture near the window will burn. To cause significant damage, more fuel will be needed.

- Take a three-liter jar (two are better), fill it with molotukha or napalm-B, tape a few hunting matches on the sides. Light the hunting matches on the spot, break the window with a hammer, throw the can inside (of course, it has to break) and get out. The quantitative problem can also be solved with a few bottles of mixture.

- Make 3-5 liters (depending on the weather) of a mixture of 1/3 of diesel oil and 2/3 of gasoline. It is possible to use gasoline without additives, but it will burn out quickly, it is better to get fuel oil (don't get burned when buying it!). But the usual Molotov cocktail or napalm will not work - they are too strong. thick, they will flow slowly. It is possible to experiment with compositions, but remember the main requirement

- The mixture should be sufficiently liquid. Pour the mixture into a 5-liter drinking water bottle. If there are no bars on the windows of the attacked object, just break the window and pour the fuel inside. If there is - also not bad, it will temporarily protect our campfire from overzealous firefighters. Make a "trunk" - a hose through which you will pour the mixture into the broken window with a crowbar. Don't be lazy, laziness is a very bad quality. Take a cork from a bottle, make the widest possible hole in it (the wider the trunk, the higher its capacity, the faster you will pour all the mixture into the room, set fire to it and get out). Solder to the plug

Hose: take a store-bought heavy-duty polyethylene bag (use the thickest possible ones) opaque bags, ordinary ashes cellophane is not suitable!), cut off a piece suitable in size (length - plus or minus a meter), fold it into a tube (in diameter it should be

"then solder the trunk to the cork in the same way, and attach a weighting ring to the other end in the same way (otherwise the trunk may come out under the weight of the fire mixture. Then similarly solder the trunk to the cork, on the other end similarly attach a weighting ring (otherwise the trunk under the weight of the fire mixture can come out of the hole and pour you), it is better from metal or a piece of plastic tubing, at the worst end is suitable and a cork from the same bottle. It is better to use a piece of fireman's trunk as a material for the trunk.

hydrant or even a plastic plumbing pipe. But garden hoses are not recommended.

too small flow capacity, by the time all the mixture flows out, the cops will already arrive. Also make a mini torch - a hunting match on a 30 centimeter stick. It is better to light it with two people, plus a sentry on the lookout. So, here you are. When going to the target, at the next corner unscrew the bottle cap and screw on the trunk. Having approached the target, the first fighter with the help of a tire iron or a bat with poke blows breaks the glass (in the place where the trunk can easily get between the bars of the grate). The second number shoves the trunk into the hole, lifts the bottle upside down and pours the mixture inside the room.

The first number at this time lights our improvised torch (of course, it must not burn out while the mixture is flowing). I would also recommend that one of you poke a knife into the bottom of the bottle to speed up the flow of the mixture (learn physics, friends - it's a very useful science for us), but not to the detriment of your main duties. Number two pulls his trunk out of the hole, number one throws a torch into it. That's it, get out of here. You can either take the bottle with you and then you can safely dispose of it, or put it in a dumpster a good distance from the action - such drinking water bottles are thrown away by the citizens by the thousands every day.

10. To increase the propaganda effect of the action, an inscription or stencil can be put on the wall of the house or on the car (without compromising safety, of course). This can be done by a third person in the team while the mixture is flowing through the window of the building. Use a vandalizer (graffiti marker) or a can of bombing paint for this purpose. Experts are able to determine the chemical composition of the paint, so alternate between different brands of paint and manufacturers. Color - black is better (more chances to survive on a burned car), emphasis on speed. Short inscriptions are suitable, especially useful before the alarm system rings, write "Khach", "Cop" or "Thief" on the car, so that people would not think that some vandals burned down a good person's car.

11. If you want to guarantee that the building burns to the ground, set fires in several groups from different directions. If there is a way to get into the building, then roll all the furniture in the room into one pile (in the inner corner of the room), pour the mixture over it and the outlets in the room, and set it on fire. It would not be bad to arrange a skovoznyak, so that the building would be blown through by the wind. We can put a gas cylinder in our fire (see on the Anarchist website at the link above). Using boards with nails (watch out for fingerprints!), fallen wood, or "garlic" made of the same nails, you can block the fire trucks' access to the building.

to the building. Remember that these activities are time-consuming, and the less time you spend at the action site, the better.

12. The same instructions can be used not only to organize arson, but also to spread agitation or subversion.

13. The secret of elusiveness. Following all safety precautions makes the group almost elusive. This "almost" is the factor of chance, the probability that something will go wrong. For example, the police will take an interest in your safe house, or an amateur mushroom picker will take an interest in you. sees you burying the body. It's accidents like that that help the bloodhounds solve even well-organized underground groups. For example, the above-mentioned ABTO was burned by a patrol of the police at the site of the action. Such emergency situations must be foreseen by to the max, but you can't insure against everything. But this factor can also be controlled.

There are two ways to do it:

- **Rational**. Everything is simple enough, I will explain by example. It is known that the participants of the Great Patriotic War, who entered the front in 1941-1942 after the war survived less than the soldiers who were drafted closer to the end of the war, in 1944-1945. The explanation is simple: veterans of the first days of the war participated in more battles, and the more battles you went through - the more chance to die: not in the first, so in the second, not in the second, so in the tenth, not in the tenth, so in the hundredth. For example, Scandinavian Vikings rarely died of their own accord, as they fought all their conscious life.

Conclusion: in order to remain elusive, the **number of shares your group commits will have to be reduced**. How many shares can one group make without being

uncovered? Direct action practice has shown that the average autonomous group can do 10 actions before it is discovered. Some manage to do 15-20 actions, the most successful in the history of autonomous resistance legendary AGS Russian Wolves did, as they claim, more than 30 actions and remained uncaught, but to all appearances there were a lot of professional military and intelligence officers in their ranks, and to lie a little bit in the

There was nothing to prevent them from doing so in their application - who's going to check? It is better not to take any risks, and stop at the figure of 10 shares. Take the example of the national pyromaniac: he burned 8 cars and was gone. I understand it's hard to stop when you've just separated, gained experience. **But your nation needs you on the fronts** of the Russian national liberation revolution, and **you are of no use behind bars**.

will not be enough. After the group has gone into conservation, do not disperse under any circumstances - the group in conservation will only stop carrying out actions. **Prepare for the revolution: arm yourselves, study military science, do your military sports training, Conduct reconnaissance of future targets, so that you will be ready at X Hour. Advocate online, and be sure to share your invaluable experience with new generations of autonomous nationalists.**

- **Irrational**. In addition to rational (i.e. quite scientific) methods of defense, such as observing conspiracy measures, permanently changing the location of your base and reducing the number of shares, there are irrational methods of defense against chance. So, **even if you have pre-determined the number of shares and planned for everything, things can happen that are completely unpredictable: for example, your car falls under the ground. My point the theory is that if something cannot be insured against by rational (reasonable) methods, then it is necessary to look for methods from the irrational sphere.** They are considered irrational because they cannot be explained in terms of. Intuition (**Latin:** Intuitio - "intuition").

contemplation) - feeling, insight, direct comprehension of truth without logical justification, ability to anticipate danger. Existence of such

ability is a scientifically proven fact, but science can't explain how it works. Nevertheless, the ability to anticipate danger has saved people many times. Trust your intuition

- If you have a "gut feeling" that something will go wrong, it is better to postpone action to another night or recheck the "bottlenecks" in your plan. Develop your intuition - its scope of application is much broader than a simple premonition of danger. In management (the science of management), there is a way for a manager to make decisions based on intuition.

In an extreme situation, this method can bail out a group. Superstition is one of the oldest form of defense. Before you twist your finger, ask any pilot, stewardess or parachutist you know - people whose profession is connected with the sky are usually very superstitious: they try not to schedule flights on the 13th, and there are almost no flight numbers.

is the number 13. Or, for example, the great Russian commander Alexander Suvorov, whose passage through the Alps is considered impossible from the point of view of the theory of military science, according to the memories of contemporaries was a superstitious man: did not like Mondays, avoided the mirror. But not

rush to shy away from Mondays and 13th numbers and immediately spit over your left shoulder:

there are no standard recipes here and cannot be. For example, the author is personally acquainted with

by a man who thinks the number 13 is lucky. Superstition can only be defined on the basis of intuition, and nothing else. It is just normal for people in dangerous professions to be superstitious. There are other methods of irrational defense, but there are so many and I'll give you the

I will not burden you with them, if you are interested, you will find them yourself. Just remember - irrational methods provide insurance only where rational methods do not work, i.e. even if you go to the action on your happiest day of the year without a mask, gloves and with a cell phone in your hand.

the next few days are unlikely to be happy ones.

14. The law of forensics: an increase in the number of crimes reduces the inevitability of punishment. That is, the more similar crimes are committed, the greater the chance of the criminal getting away with it. To further protect yourself, spread the word.

(via TorBrowser) this text on as many relevant sites as possible. If night arson has become a mass phenomenon, it is time to join. This way you will not only protect yourself, but also other arsonists.

Ask why so much has been written about the subject of arson?

Simply put, arson is just about the easiest direct action you can do, you just need a little bit of experience with it. Arson is easier than going out and beating someone up. Most arsonists are never found, never found, never found.

the clearance rate is high. But it may be that the cops have a longer memory than we do, and if you are lucky and the cops decide that your action poses a threat to the state, then

It can take months - or even years - to investigate. Unlike the beating of guest workers, arson is not only supported by the public, but is also one of the most difficult crimes to solve - **even arsonists cannot be dealt with.**

professional detectives from European countries, far beyond our uneducated cops. Remember at least the "epidemics" of car arsonists.

The arson material was taken from the open source LITERARY TERRORISM.

Original manual title: Direct Action, Night Arson.

I tried to rewrite the text shorter, and arrange it in my own way to make it more pleasant to read.

7) SORATNIKI.

- Do not gather 10 or even 20 people to beat up a couple of Khachas and alkas, you will only attract the attention of the police and ordinary passers-by! I DO NOT ADVISE YOU TO OPENLY WRITE IN

ON THE INTERNET THAT YOU'RE ORGANIZING A RALLY, YOU MIGHT GET SOME INTEREST.

MUSORA! Look for associates in the chat rooms of various right-wing Telegram channels. If a person without an avatar and a suspicious nickname writes to you with the purpose of meeting and holding an action, you **should immediately block him, or demand proof that he is not a dog of the system.** But it can also happen that a person may have a profile similar to the real one, but

it could be garbage! Ideally, you can corporatize alone, but the range of actions will be much narrower, **but it's better than inaction and shouting on the Internet how much you hate everyone**, isn't it?

DON'T LOOK FOR ASSOCIATES IN TIC TOC!

- There's the most assholes out there who are ready to rub in your trust, and grab you right away when you trust him.

8) SHOOTING DEVICE.

- Ideally, it should be a digital video camera. I don't recommend buying cheap cameras on the WB, or similar Chinese variants, they are extremely poor quality. If there is no money for a camera, you can also use your personal phone, but from it you will need to **remove the sim card** and **turn on the flight mode**. It is not convenient to shoot the action with one hand and attack the victim at the same time, so you can call your companion, who will shoot you,

It is desirable to have 3 of you, because: the **first one will hit the victim**, the **second one will be the first one's backup in case the victim is aggressive and fights back or tries to run away**, the **third one will take video**. But if you go hunting alone, you can buy a small camera that can be attached to your chest or headgear.

9) MESSENGERS TO COMMUNICATE WITH ASSOCIATES AND PLAN ACTIONS.

- It is extremely **unsafe** to coordinate on Telegram. Because at the moment the cops have all our correspondence, you can't write about your plans in Telegram, for example: don't write that you want to organize a terrorist attack, a mass shooting, or to go on a rally, because you just If you decide to use Telegram, at least not from your main account (virtual number, proxy, VPN, etc.). If you decide to Telegram, at least not from the main account (**Virtual number, proxy, vpn, etc.**) the best anonymous messengers that do not store your data and correspondence are: Signal , SimpleX, Wire and Briar and also a good option Element.

WHERE TO DOWNLOAD THESE ANONYMOUS MESSENGERS AND WHAT ARE THEY SO GOOD FOR?

- Signal: This messenger is secure and private.

Pros:

Encryption at the highest level - end-to-end, no one but you and the person you are talking to can read the messages.

Minimal data about you - Signal does not collect information about your contacts, location or correspondence. Open code - anyone can verify that there are no hidden vulnerabilities in the program.

No ads and no tracking - messenger is not created to make money from users.

Minuses:

Fewer users - Signal is not yet as popular as WhatsApp or Telegram. But perhaps that's even better, as the more users the bigger the app is

become popular and law enforcement will start to take an interest in it, and after a while they'll have your data.

Binding to a number - you can't register without a phone number, but you can buy a virtual number and log in from it.

Limited features - no cloud storage and backups only work locally.

If you care about keeping your correspondence private and avoiding surveillance, Signal is a **good choice**. Installation:

First, be sure to install this app on your mobile device,

Android/Ios doesn't matter. In AppStore or PlayMarket in the search bar, I think you can figure out where to install this application without me.

If you want to use this application on your personal computer then you should

You will first need to install the app on your phone, and then log in to your account through the QR - code.

Download link for pc - <https://signal.org>

- SimpleX: SimpleX is a messenger for those who want maximum anonymity. (But we all know that maximum anonymity is impossible.) Unlike most other applications, it does not require a phone number or any registration.

Pros:

- **Complete anonymity** - you don't need to provide a number, email or other personal details.
- **No central servers** - messages are transmitted through random nodes, making snooping more difficult.
- **Encryption** - correspondence is protected from outsiders.
- **Open code** - anyone can check that there are no hidden vulnerabilities in the program (**Unlike Telegram**).

Minuses:

- **It's harder to get used to** - if you use WhatsApp or Telegram, then the interface SimpleX may seem unfamiliar.
- **No cloud storage** - messages are only stored on the device, so if you lose it, it will be impossible to recover your history.
- **Fewer users** - it's harder to find people you know in SimpleX than in popular messengers.

If anonymity is important to you and you are willing to sacrifice convenience for privacy, SimpleX is a **good choice**.

Installation:

It's simple, on your mobile device, Android/Ios, in the AppStore or PlayMarket in the search bar I think and without me and yourself without me will understand where to install this application.

Installation on computer: Go to the link below, and play the installation.

Download link for pc - <https://simplex.chat>

Wire: Wire is a messenger that emphasizes **security and convenience**, especially for businesses. **It supports encryption and works on a variety of devices, but with a that requires registration.**

Pros:

- **End-to-end encryption** - messages, calls and files are protected from outsiders.
- Works on multiple devices - you can use on your phone, tablet and computer at the same time.
- **Open source code** - anyone can verify the security of an application.
- Good for business - there are special versions with features for teamwork.

Minuses:

Registration is required - you need a phone number or mail, but you can buy a virtual number and log in from it.

- **Limited popularity** - the messenger has fewer users than major competitors.
- **Some features are paid for** - business versions cost money.

Wire is a good choice for those **who want a secure messenger with the ability to work across devices, but it's more suited for business than personal communication.**

Installation:

Everything is the same as with other messengers, go to the AppStore or PlayMarket, type the name in the search box, then install, and register.

The link to install on your computer is <https://wire.com/en/>

Briar: Briar is a messenger for those **who value complete autonomy and security**. It works even without internet, using Bluetooth or Wi-Fi for messaging. This makes it especially useful in the face of blockages or network outages.

Pros:

- **Works without internet** - you can communicate via Bluetooth or local network.
- **Full decentralization** - no central servers, so data can't be stolen or blocked.
- **End-to-end encryption** - no one but you and the person you are talking to will be able to read your messages.
- **Minimal metadata** - messenger does not store or share information about your activity.

Minuses:

- **Android only** - the app isn't available on iOS yet, and it's not available on Windows either.
- **No synchronization between devices** - message history is only stored on a specific device.
- **Less convenient** - the interface is simple, but not as familiar as popular messengers.

Briar is a **great choice for those who want a fully autonomous and secure messenger, but it's more suited for emergency situations than for everyday communication.**

Installation:

The link to install on your Android is <https://briarproject.org/>

Element: Element is a messenger built on the open Matrix protocol. It gives users full control over their data and allows them to host servers independently, making it particularly popular among those concerned about security and decentralization.

Pros:

- **Decentralization** - you can use public servers or create your own.
- **End-to-end encryption** - correspondence is protected from outsiders.
- **Open source code** - anyone can test the security of the system.
- **Multi-platform** - works on computer and smartphone, there is a web version.
- **Bridging support** - you can connect other messengers such as Telegram or Slack.

Minuses:

- **Difficulty for beginners** - you need to understand the settings, especially if you want to create your own server.
- **Slow performance** - sometimes messenger can **slow** down, especially on large chats.
- **Limited popularity** - compared to WhatsApp or Telegram, there are fewer users.

Element is a great option for those who want to control their data and use a secure, decentralized messenger, but it can seem complicated for regular users.

Installation:

The link for installation is <https://element.io/>

The messenger is multiplatform, it is available on Windows/Linux as well as on your mobile devices, Ios/Android.

Conclusion:

- For Android, the best ones would be Briar **or** SimpleX messenger.
- For IOS/Windows, the best messengers would be SimpleX **and** Signal.

This is the personal opinion of the author, all messengers have been tested personally, it is written for ordinary users who need anonymity in communication.

ABOUT VPN, VIRTUAL NUMBERS, PROXY, AND WHERE TO INSTALL WHAT.

1) VPN: A VPN (Virtual Private Network) is a technology that creates a secure connection between your device and the internet. Here are the main features and benefits of a VPN:

Security: A VPN encrypts your data, making it inaccessible to outsiders such as hackers or ISPs.

Anonymity: Using a VPN, your real IP address is hidden and the IP address of the VPN server is displayed instead. This helps to maintain your anonymity online.

Access to blocked resources: VPN allows you to bypass geographical restrictions and access sites and services that may be blocked in your country.

Protection on public networks: Using a VPN on public Wi-Fi networks (e.g., in cafes or airports) helps protect your data from possible threats.

Overall, a VPN helps to ensure security and privacy when using the internet.

Which VPN should you choose and where to install it?

Some VPN providers:

<https://ipredator.se/>

<https://kebrum.com/>

<https://relakks.com/>

<https://vpntunnel.se/>

<https://ivacy.com/>

Appendices:

Personally, I often use Proton VPN and MullvadVPN, NordVPN, but, NordVPN and MullvadVPN. Paid. Proton VPN can be used for free, only you will only have access to 3 countries without premium. But that's not a bad thing either. When using Proton VPN, you should definitely enable the Kill Switch option in the settings.

Kill Switch - Kill Switch in ProtonVPN is the protection of your internet connection. If for some reason the VPN connection is interrupted, Kill Switch automatically blocks access to the Internet so that your data is not visible to outsiders. This helps to maintain your privacy and security even if the VPN goes down temporarily. This way, you can be sure that **your information remains protected.**

2) Proxy: A proxy server is an intermediate server that acts as an intermediary between your device and the Internet. When you send a request to access a website, the request first passes through a proxy server. It can perform several functions:

Anonymity: A proxy can hide your IP address, which helps keep you anonymous online.

Caching: A proxy can save copies of frequently requested pages, which speeds up access to them.

Content filtering: Some proxy servers may block access to certain sites or content.

Security: A proxy can protect your network from malicious sites and attacks.

In general, a proxy server helps to improve security, speed, and anonymity when using the internet.

Where to find Proxy and how to use it?

You can use a free proxy in Telegram channels, for example: ProxyMTProto

This proxy is free and connects you quickly, choose any Proxy you are interested in, click Connect, **and you're done! Some Web**

Proxies: <https://hidemyass.com/>

<http://anonymouse.org/>

<http://hide.pl/>

<http://hideme.ru/>

<http://guardster.com/free/>

3) Virtual Numbers: Virtual numbers are phone numbers that are not tied to a specific physical phone or SIM card. They work through.

Internet and can be used for a variety of purposes. Here are the main reasons why they are needed and how they are useful:

1. **Anonymity:** Virtual numbers allow you to hide your real phone number, which is useful when registering on websites or apps where you don't want to reveal your personal details.
2. **International calls:** Virtual numbers make it easy and inexpensive to communicate with people in other countries, as they often offer better rates for international calls.
3. **Business convenience:** Companies can use virtual numbers for customer support, hotlines or for different departments without buying separate phones.
4. **Call management:** Virtual numbers can redirect calls to different devices, allowing you to receive calls on your computer, tablet or smartphone.
5. **Temporary numbers:** Some services offer temporary virtual numbers that can be used to confirm registration or receive SMS and then deleted.

In general, virtual numbers provide convenience, security and flexibility in communication.

Personally, I have used a Telegram Voting service called GreedySMS to make purchases a virtual number. It's easy to use, codes come quickly, and numbers don't go away after a few months. I recommend you to take Russian or English numbers, the balance can be topped up in different ways, even Telegram stars.

Online safety tips:

- **It is desirable to make up a new identity**, come up with a new nickname under which you will act, be sure that this nickname was not in your social networks like Vk, Instagram, Facebook, as it will make it easier to discover your identity. **Do not share your photos with anyone**, as this can backfire on you. **Do not tell your age, country of residence, city, first and last name, and other personal information**. I think you know without me that you can't do that. But there are such individuals who brag on the Internet about their pathetic action, throwing their photos on the right and left, and then for some reason after a while they are taken away by garbage.

- **Also be sure to join our MIRROR851 (It's an all channel cult adapter C.C.M.)** in this channel open the link to the FILES V.1 channel, **there will be manuals on the Internet security, manuals on any explosives, poisons, manuals on cold weapons, manuals on firearms, manuals on homemade weapons, and much more! Also there will be different ultra-right literature of such popular personalities as Dmitry Borovikov, Dmitry Nesterenko, Alexei Voevodin, Egor "Maniac" Krasnov, Adolf G., Maxim Marcinkiewicz, Andrey Pronsky "Bladi", and many others!**

10) **IF YOU DO GET CAUGHT BY THE COPS OR SEARCHED.**

- They will probably search your home. You must not have any weapons or right-wing literature in your home. **(Because if a search of your home turns up right-wing literature.** If you have already been searched, **you should immediately delete all messengers at that moment in which you even just chatted about far-right ideology and misanthropy.** If it was telegram, just delete the account. **Ideally, you should not have anything right-wing stored on your devices, you should use external media that can be easily destroyed in the event that you do search!**

- **DENY YOUR INVOLVEMENT IN NAZISM AND MISANTHROPY.** **COME UP WITH A GOOD ALIBI WHERE YOU WERE ON CERTAIN DATES, FOR EXAMPLE, SITTING AT HOME AND WATCHING SOMETHING THE INTERNET, FOR THIS PURPOSE IN MOMENTS OF ACTION YOU CAN TURN ON SOMETHING ON THE COMPUTER ON THE INTERNET OR SIMULATE CORRESPONDENCE, YOU CAN ALSO SAY THAT TRAVELED TO AN EVENT AND SHOW A TICKET TO IT, WHICH YOU BOUGHT IN ADVANCE FOR SUCH AN EVENT, THE MAIN THING IS TO INCLUDE IMAGINATION AND EVERYTHING PLAN, THINK AHEAD, BE ONE STEP AHEAD OF THE GARBAGE!**

- **BY FOLLOWING THESE RULES, YOU REDUCE YOUR CHANCE OF GETTING CAUGHT TO ZERO.**

IF YOUR TARGETS ARE KHACHIS, NEGROES, ALKAHS AND OTHER BIOM TRASH, GO AHEAD AND SCORE. KICK THIS PATHETIC BIOMASS INSTEAD OF DOING NOTHING. FIRST OF ALL, PROVE TO YOURSELF THAT YOU ARE NOT A TOLERANT PERSON, NO MORE POINTLESS FIGHTING ON THE INTERNET FOR AN IDEA, ONLY DIRECT ACTION AND NO PITY FOR THE ENEMY. PROVE IT WITH DEEDS, NOT WORDS.

One of the main weapons in our idea is Hate.

In a bad case it can only hurt you, and in a good case it can hurt all your enemies. Either hatred will eat up your nerves, leaving only a burned out something, or it will eat up all the rot that this hatred deserves. It all depends on what kind of person you are. As the modern wrestling classic said:

"Not everyone is capable of Hate."
